

Y5/6 Maths is brilliant!

Just to remind you how Maths is used in many aspects of real life, George's Mum sent me an email after our triangular numbers lesson to say that pharmacists used to use triangles to count out tablets in the pharmacy before they came in blister packs. Everyone knew their triangular numbers off by heart, despite them being printed on the triangle:

This is a picture of a plastic counting triangle used to count the tablets.

Ask adults to tell you other ways that Maths is used in their job or in adult life generally.

Maths really is brilliant!

Ms. P.
