

Rounding up the Sheep

Adding More Game

This game encourages children to add more to a group. This will help children to see that by adding more, the group of objects becomes larger and the quantity changes.

How to Play

1. Shuffle the sheep cards and place them in a pile, facing downwards.
2. Choose the colour of your counters.
3. The first player takes one card and places it in the box labelled 'First'.
4. Count the number of sheep on the card.
5. The same player then takes a second card and places this in the second box, labelled 'Then'.
6. How many more sheep are there?
7. How many sheep are there altogether now? You may want to find the answer by counting all of the sheep or by counting on from the first number.
8. Place a coloured counter on the box showing the correct number.
9. Take turns to play. If the number you need has already been taken, you must miss a turn.
10. The winner is the person with the most counters when all the cards have gone.
