GEOMETRY properties of shapes/ position and direction SEQUENTIAL LEARNING OSMOTHERLEY CP

Highlighted= 2020 Maths guidance ready-to-progress criteria

Year group	sequence	methods
FOUNDATION	*explore shape and space through spatial	Using shapes which fit into
	awareness	spaces/jigsaws/filling and emptying
	*investigate 3D shape	containers
	*investigate 2D shape	Using blocks to create their own shapes and
	*explore patterns initially simple, moving to	making own arrangements
	more complex patterns	Categorising objects according to shape and
		size
		Selecting particular named shapes
		Investigate shape in the environment and in
		objects

ONE	Pupils should be taught to: * recognise and name common 2-D and 3-D shapes, including: 2-D shapes [for example, rectangles (including squares), circles and triangles] 3-D shapes [for example, cuboids (including cubes), pyramids and spheres] *compose 2D and 2D shapes from	Pupils handle common 2-D and 3-D shapes, naming these and related everyday objects fluently. They recognise these shapes in different orientations and sizes, and know that rectangles, triangles, cuboids and pyramids are not always similar to each other.
	smaller shapes to match an example, including manipulating shapes to place them in particular orientations Pupils should be taught to: * describe position, direction and movement, including whole helf quarter and threequerter	Pupils use the language of position, direction and motion, including: left and right, top, middle and bottom, on top of, in front of, above, between, around, near, close and far, up and down, forwards and backwards, inside and outside.
	turns.	Pupils make whole, half, quarter and three- quarter turns in both directions and connect turning clockwise with movement on a clock face.

TWO	Pupils should be taught to:	
	* identify and describe the properties of 2-D shapes, including the number of sides and line symmetry in a vertical line	Pupils handle and name a wide variety of common 2-D and 3-D shapes including: quadrilaterals and polygons, and cuboids, prisms and cones, and identify the properties of each

	 * identify and describe the properties of 3-D shapes, including the number of edges, vertices and faces * identify 2-D shapes on the surface of 3-D shapes, [for example, a circle on a cylinder and a triangle on a pyramid] * compare and sort common 2-D and 3-D shapes and everyday objects. 	 shape (for example, number of sides, number of faces). Pupils identify, compare and sort shapes on the basis of their properties and use vocabulary precisely, such as sides, edges, vertices and faces. Pupils read and write names for shapes that are appropriate for their word reading and spelling. Pupils draw lines and shapes using a straight edge.
THREE	 Pupils should be taught to: * order and arrange combinations of mathematical objects in patterns and sequences * use mathematical vocabulary to describe position, direction and movement, including movement in a straight line and distinguishing between rotation as a turn and in terms of right angles for quarter, half and three-quarter turns (clockwise and anticlockwise). Pupils should be taught to: 	 Pupils should work with patterns of shapes, including those in different orientations. Pupils use the concept and language of angles to describe 'turn' by applying rotations, including in practical contexts (for example, pupils themselves moving in turns, giving instructions to other pupils to do so, and programming robots using instructions given in right angles). Pupils' knowledge of the properties of shapes is extended at this stage to symmetrical and non-symmetrical polygons and polyhedra.

*draw polygons by joining marked points	Pupils extend their use of the properties of
and identifying parallel and perpendicular	shapes. They should be able to describe the
sides and the second	properties of 2-D and 3-D shapes using accurate
* draw 2-D shapes and make 3-D shapes using modelling materials; recognise 3-D shapes in different orientations and describe them	language, including lengths of lines and acute and obtuse for angles greater or lesser than a right angle.
* recognise angles as a property of shape or a description of a turn	Pupils connect decimals and rounding to drawing and measuring straight lines in centimetres, in a variety of contexts.
* identify right angles, recognise that two right angles make a half-turn, three make three quarters of a turn and four a complete turn; identify whether angles are greater than or less than a right angle	NB no position and direction statutory targets in y3
* identify horizontal and vertical lines and pairs of perpendicular and parallel lines	
NB no position and direction statutory targets in y3	

FOUR		
	Pupils should be taught to: * compare and classify geometric shapes, including quadrilaterals and triangles, based on their properties and sizes	Pupils continue to classify shapes using geometrical properties, extending to classifying different triangles (for example, isosceles, equilateral, scalene) and quadrilaterals (for example, parallelogram, rhombus, trapezium).
	 * identify acute and obtuse angles and compare and order angles up to two right angles by size * identify lines of symmetry in 2-D shapes 	Pupils compare and order angles in preparation for using a protractor and compare lengths and angles to decide if a polygon is regular or irregular.
	presented in different orientations * complete a simple symmetric figure with respect to a specific line of symmetry.	Pupils draw symmetric patterns using a variety of media to become familiar with different orientations of lines of symmetry; and recognise line symmetry in a variety of diagrams, including
	*draw polygons specified by coordinates in the first quadrant, and translate within the first quadrant. *identify regular polygons, including	original shape.
	equilateral triangles and squares, as those in which the side-lengths are equal and the angles are equal. Find the perimeter of regular and irregular polygons.	
	equilateral triangles and squares, as those in which the side-lengths are equal and the angles are equal. Find the perimeter of regular and irregular polygons.	

FOUR Contd.	*identify line symmetry in 2D shapes presented in different orientations. Reflect shapes in a line of symmetry and complete a symmetric figure or pattern with respect to a specified line of symmetry.	Pupils draw a pair of axes in one quadrant, with equal scales and integer labels. They read, write and use pairs of coordinates, for example (2, 5), including using coordinateplotting ICT tools.
	 Pupils should be taught to: * describe positions on a 2-D grid as coordinates in the first quadrant * describe movements between positions as translations of a given unit to the left/right and up/down * plot specified points and draw sides to complete a given polygon. 	

 identify 3-D shapes, including cubes and other cuboids, from 2-D representations know angles are measured in degrees: estimate and compare acute, obtuse and reflex angles draw given angles, and measure them in degrees (o) identify: angles at a point and one whole turn (total 360 degrees) angles at a point on a straight line and half a turn (total 180 degrees) identify and the straight line and half a turn (total 180 degrees)
--

FIVE	*compare areas and calculate the	Pupils recognise and use reflection and
Contd.	areas of rectangles including	translation in a variety of diagrams, including
conta.	squares, using standard units	continuing to use a 2-D grid and coordinates in
		the first quadrant.
		Reflection should be in lines that are parallel to
		the axes.
	Pupils should be taught to:	
	* identify, describe and represent the	
	position of a shape following a reflection or	
	translation, using the appropriate language.	
	and know that the shape has not changed.	
SIX	Pupils should be taught to:	Pupils draw shapes and nets accurately, using
017		measuring tools and conventional markings and
	*draw. compose and decompose shapes	labels for lines and angles
	according to given properties, including	iusois for mice and angres.
	dimensions, angles and area and solve	Pupils describe the properties of shapes and
	related problems	explain how unknown angles and lengths can be
		derived from known measurements
	* draw 2-D shapes using given dimensions and	These relationships might be expressed
	angles	algobraically for example $d = 0 \times r$
		algebraically for example, $u = 2 \times 1$,
	* recognise, describe and build simple 3-D shapes.	a = 180 - (0 + c).
	including making nets	
	* compare and classify geometric shapes based on	
	their properties and sizes and find unknown	

SIX	angles in any triangles, quadrilaterals, and regular polygons	
Contd.	 * illustrate and name parts of circles, including radius, diameter and circumference and know that the diameter is twice the radius * recognise angles where they meet at a point, are on a straight line, or are vertically opposite, and find missing angles. Pupils should be taught to: * describe positions on the full coordinate grid (all four quadrants) * draw and translate simple shapes on the coordinate plane, and reflect them in the axes. 	 Pupils draw and label a pair of axes in all four quadrants with equal scaling. This extends their knowledge of one quadrant to all four quadrants, including the use of negative numbers. Pupils draw and label rectangles (including squares), parallelograms and rhombuses, specified by coordinates in the four quadrants, predicting missing coordinates using the properties of shapes. These might be expressed algebraically for example, translating vertex (a, b) to (a – 2, b + 3); (a, b) and (a + d, b + d) being opposite vertices of a square of side d.
